

InHand InMetrics K16 Body Temperature Reading Kiosk Success story with

InHand Networks was great at supporting ProMach in testing a couple of sites as pilots to “prove-out” the technology. InHand participated in several conference calls to help us optimize our processes which lead to a positive pilot experience.”

J.R. Roemke,
Vice President of Promach

ProMach is a comprehensive provider of complete packaging solutions, from line design to the end of the line and beyond.

Background

Promach is a manufacturing company and as Tier-1 vendor to the consumer product industry, they try as much as possibly they can to keep the businesses running. Keeping employees safe is the top priority during these unprecedented times.

InHand Networks provides InMetrics Body Temperature Reading Solutions to help Promach deliver a safe environment and get back to work safely.

Challenges

- Large volume of daily traffic entering the workplace
- The accuracy of temperature control and monitoring devices
- Non-contact infrared thermometers to reduce cross-contamination risk

Solution

Businesses have been using standard hand-held thermal readers as a way to screen patrons as they enter a business. A dedicated receptionist takes temperature readings as people enter, and in some office settings employees are expected to take and record their own temperature readings as they enter. The shortcoming here is quite obvious — any hand-held device becomes a conduit to pathogen spread.

There's no need to piece together a temperature-screening solution yourself. We have created affordable turn-key solutions - The InMetrics K16 Body Temperature Scanning Kiosk.

It is a part of the larger "Safe Space" ecosystem that encompasses the hardware, software.

 <p>InMetrics K16</p> <p>50+ People Per Minute</p> <p>Unattended</p> <p>Accuracy OK</p>	Other Kiosks	Handheld Reader

	Unattended	Needs people managing it
	Accuracy ?	Accuracy OK

InMetrics K16

- Instantaneous reading within 1 Sec
- Multiple modes supported:
Walk-By /One-by-One /Mask Detection
- Real-time verbal guidance for smooth onsite operations
- Easy to Install & Use, No IT Integration Required

Benefits

Features free-contact, high-accuracy and flexible

Plug & play supported

It can be used out of the box with no IT integration required and ease the mass deployment.

An advanced infrared camera

It offers instant reading and makes no interruptions to normal activities minimal.

Walk-by mode supported

Scan multiple people at a time in rapid succession (50 people/min) to keep the traffic moving and save the image & temperature records for 24 hours monitoring.

Face Mask Detection

With the AI advanced face mask detection feature, can recognize people that are wearing masks and still provide an accurate reading

Since we have place units for almost every site location and reception of the technology and service has been very positive.”

J.R. Roemke,

Vice President of Promach

More Application

Available with desk stand, floor stand, wall mount and more options, the InMetrics K16 Non-contact Body Temperature Reading Kiosk is ideals for offices, factories, schools, hotels, movie theaters, super markets and more.
