

IG502 V2.0.0.r14208 Release Log

New Features

1. Added L2TP, AAA authentication and Link Backup functions, supporting LQA3–D485 models.
2. The DO digital output mode adds the retentive function.
3. Added HTTP time synchronization function, which takes effect when SNTP fails.
4. Added the functions of DM platform SSH remote device backend and lower device backend.
5. Added dual SIM card fast switching function.
6. Added a new shutdown function for the LAN interface.

BUG Repair

1. Fix the problem that the APN configuration is lost after the device restarts.
2. Fix the problem that the APN setting of FF53 module does not take effect.
3. Fix the problem that the firewall configuration is lost after the device restarts.
4. Fix the memory leak of the dialer.
5. Fix the bugs related to the remote installation of the SDK: the installation fails and cannot be restored, the installation state is not restored correctly, and the original SDK will be deleted if the installation fails.
6. Fix that when DO is configured as digital output and DI is configured as pulse counting, the pulse counting of DI will not count.
7. Fix the DI3 pulse count value to 0, and the count of this channel will automatically become 1 after the device is powered off and restarted.
8. After the Modbus TCP slave function is turned off, manually power off and restart the device. After the device restarts, the Modbus TCP slave function will be automatically turned on.
