IG502 V2.0.0.r14218 Release Log

Optimization adjustment

1. Optimize the Python App log management function, support multiple log files and large log files;
2. Optimize the deletion logic of offline signal value and flow;
3. Upgrade Dropbear version to enhance security;
4. Upgrade the version of Nginx.

BUG Repair

1. Fixed the problem that when the DM platform upgrades the Python App, repeated downloading of the App package consumes traffic data;
2. Fix the problem that the creation of the signal/traffic directory fails when the button is reset to factory settings;
3. Fix the problem that the IO board version cannot be upgraded.
